

KEVIN KLEIN

Senior AI Engineer

0557749046 • kevinklein.dev@proton.me • <http://www.linkedin.com/in/kevinklein93> • Tel Aviv • 07.08.1993 • Israel

Summary

Senior AI Engineer with 8+ years of experience designing, deploying, and scaling large-scale AI and LLM systems. Proven track record of architecting end-to-end LLM platforms – including agentic AI workflows and retrieval-augmented generation (RAG) – from data ingestion and knowledge-retrieval to GPU-optimized inference and Kubernetes-based deployment in regulated, high-impact environments such as healthcare. Strong background in MLOps, distributed systems, and applied deep learning, with a strong mathematical foundation from ETH Zurich.

Skills

LLM: Agentic AI (MCP) • OpenWebUI • vLLM • Huggingface • DSPy • LangChain • RAG pipelines • Parallelization • Streaming • Grafana • Vector DB

Machine Learning: Python • PyTorch • Ray • DVC • Scikit-learn • MLflow • Time-series Prediction • Imbalanced Classification

MLOps & Infrastructure: Kubernetes • Docker • Docker Compose • GCP • Terraform • Argo CD • Linux • Git • CI/CD • Claude Code

Team Skills: Agile/Sprint-based Development • Cross-functional Communication • Technical Documentation • System Design

Experience

X-cardiac

Berlin/Remote

Senior AI Engineer

02/2022 - Present

- Architected and deployed an agentic AI system that bridges the gap between clinicians and complex healthcare data, enabling seamless conversational access to structured and unstructured patient records
- Implemented a tool-capable agent powered by an MCP server to retrieve and process patient data from various healthcare sources
- Engineered a custom RAG pipeline to enhance responses by prioritizing and leveraging superior context from private knowledge base
- Deployed a high-performance LLM inference engine on a Kubernetes cluster using vLLM, optimizing GPU utilization and implementing load balancing for low-latency serving
- Architected deep learning models to forecast postoperative cardiac complications using imbalanced time-series data, improving early intervention capabilities by up to 6 hours
- Built MLflow and DVC pipelines to track model experiments and version datasets, ensuring reproducibility and data-driven decision making
- Parallelized training runs across multi-GPU clusters using Ray, significantly accelerating model development cycles

4flow

Berlin

Data Scientist

06/2019 - 06/2021

- Designed an object detection model that detects and evaluates information from documents and thereby reducing workload by 40%
- Built an NLP application that automatically classifies E-mails based on problems and decreased manual effort by 25%
- Developed an RNN model that obtained E-mails from ticket system, returns exception class and filled ticket with appropriate information

BDO Switzerland

Zurich

Risk Analytics Consultant

10/2016 - 06/2018

- Led the first international advisory engagement for the firm, advising the European Central Bank on a major bank's asset quality review
- Built an R-based algorithm that improved the loan selection process, decreasing the selection time by 50% and enabled a more efficient analysis of the loan portfolio for potential risks

Education

ETH Zurich

Zurich

M.Sc. in Quantitative Finance

09/2014 - 06/2016

- Magna Cum Laude, ETH Zurich, Zurich
- Thesis: Order book models and price formation

Vienna University of Technology

Vienna

B.Sc. in Technical Mathematics

10/2010 - 06/2014
